sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                              107 FEFLGNISGHPYTLHTNVYY-KGTGDKEQQFHLWFDPTVN--FHTYCTTWNPQRIJFTVD 163

The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

Following processing of the signal peptide the mature protein is produced, comprising the amino terminus of the B.macerans beta-glucanase and the carboxyl.terminal half of the B.amylo-liquefaciens beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4)-beta-glucans. Reducing sugars are obtd. at high temps. and

This sequence is the lichenase (licA) of Orpinomyces sp. strain PC-2 of the invention. The protein was purified from a fungus or a fungal culture or from a recombinant DNA molecule having a fungal lichenase coding sequence. The lichenase enzyme hydrolyses the beta-1,4-glucan bonds adjacent to beta-1,3-linked glucan bonds, but does not cleave beta-1,4-linked glucans. They can be used for the treatment of animal grain-containing feeds to improve nutrient availability and for treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          83 EVLGKNPGSFQSNIITGKAGAQKTSEKHHAVSPAADQAFHTYGLEWTPNYVRWTVDGQEV 142

The enzyme is useful in brewing and for degrading beta-glucanases that cause problems during filtration.

                                                                                                                                                                                                                                                                                                                                                                                Vonwettstein D;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This hybrid protein is encoded by the beta-glucanase-Hi gene. Following processing of the signal peptide the mature protein is produced, comprising the amino termina of the amylolique faciens beta-glucanase and the carboxyl-terminal half of the B.macerans beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4)-beta-glucans. Reducing sugars are obtd. at high temps. and thus this enzyme can be used in the mfr. of food prods., esp. beer and animal feed (eg for feeding poultry). See also AAQ05833.

The enzyme is useful in brewing and for degrading beta-glucanases that cause problems during filtration.

                               This sequence represents a novel beta-glucanase isolated from Bacillus alkalophilus DSM 9956. This enzyme is useful for removing glucan and/or lichenan from membranes and equipment in the food industry, especially the brewing industry.

The present invention relates to a food stuff comprising barley feed and transgenic barley malt where the transgenic barley malt comprises a recombinant carbohydrate degrading enzyme comprising a (1,3-1,4)-beta-glucanase. The food stuff is useful to feed animal, preferably chickens Barley is cheaper than corn, the principal foodstuff of chickens. Chickens cannot efficiently utilise barley as an energy source as they do not possess a gut enzyme that depolymerises beta-D-glucan, major carbohydrate present in the barley endosperm. The invention provides a barley based foodstuff which comprises a recombinant carbohydrate degrading enzyme improving the nutritional value of the foodstuff.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Barley; transgenic barley malt; carbohydrate degrading enzyme; chicken; (1,3-1,4)-beta-glucanase; nutritional value; foodstuff; thermostable.
